Sound can propagate through a medium such as air, water and solids as longitudinal waves and also as a transverse wave in solids (see Longitudinal and transverse waves, below). The sound waves are generated by a sound source, such as the vibrating diaphragm of a stereo speaker. The sound source creates vibrations in the surrounding medium.

The form or shape of  $F$  in d'Alembert's formula involves the argument  $x \pm vt$ . Constant values of this argument correspond to constant values of  $F$ , and these constant values occur if  $x$  increases at the same rate that  $vt$  increases. That is, the wave shaped like the function  $F$  will move in the positive  $x$ -direction at velocity  $v$  (and  $G$  will propagate at the same speed in the negative  $x$ -direction).
