In problems concerning gravity on earth the acceleration (a) becomes approximately 9.8 meters per second squared (a). An object that starts from rest falls for one second at a speed of 9.8 m/s. After 2 seconds the speed is 19.6 m/s and after 3 seconds it is 29.4 m/s.

Small modular reactors (SMRs) are a type of nuclear fission reactor which are smaller than conventional reactors, and manufactured at a plant and brought to a site to be fully constructed. Modular reactors allow for less on-site construction, increased containment efficiency, and heightened nuclear materials security.

Small modular reactor - Wikipedia

Xenon-135 (^{135}Xe) is an unstable isotope of xenon with a half-life of about 9.2 hours. ^{135}Xe is a fission product of uranium and it is the most powerful known neutron-absorbing nuclear poison (2 million barns; up to 3 million barns under reactor conditions.), with a significant effect on nuclear reactor operation. The ultimate yield of xenon-135 from fission is 6.3%, though most of this is ...

Accumulator: used in domestic water applications to stabilize the pressure in the system and avoid the pump cycling on and off every time a tap is opened somewhere in the house. The flexible bladder is pressurized with air at the pressure desired for achieving the correct flow rate at the furthest point of the house or system.

Au cours des années 1930, l'ingénieur Harold Edgerton commença à s'intéresser à la lumière stroboscopique pour des applications en photographie à grande vitesse. Cette étude le conduisit à l'invention d'un stroboscope au xénon, au sein duquel la lumière était générée par une décharge de courant très brève dans un tube rempli de xénon.

Waste-heat recovery with thermoelectric power generators can improve energy efficiency and provide distributed electricity generation. New thermoelectric materials and material performance improvements motivate development of thermoelectric generators for numerous applications with excess exhaust and process heat.
