A kernel is the central part of an operating system.It manages the operations of the computer and the hardware - most notably memory and CPU time.. There are two types of kernels: A microkernel, which only contains basic functionality; A monolithic kernel, which contains many device drivers.; A computer user never interacts directly with the kernel.

In computer science and information science, an ontology encompasses a representation, formal naming, and definition of the categories, properties, and relations between the concepts, data, and entities that substantiate one, many, or all domains.. Every field creates ontologies to limit complexity and organize information into data and knowledge.As new ontologies are made, their use hopefully ...
