Fatigue life. The American Society for Testing and Materials defines fatigue life, N_f , as the number of stress cycles of a specified character that a specimen sustains before failure of a specified nature occurs. For some materials, notably steel and titanium, there is a theoretical value for stress amplitude below which the material will not fail for any number of cycles, called a fatigue ...

Fracture strength, also known as breaking strength, is the stress at which a specimen fails via fracture. This is usually determined for a given specimen by a tensile test, which charts the stress-strain curve (see image). The final recorded point is the fracture strength.

AFMAT - Fracture Mechanics Database. AFMAT - Fracture Mechanics Database is now available for use by AFGROW, Version 5 Users who have been issued a permanent user license keeps the maintenance current. The database contains data for over 600 materials, 1229 sources, and 11 property types (da/dN, da/dt, KIC, a vs. N, etc.).

What causes Corrosion Fatigue? Corrosion Fatigue is caused by crack development under the simultaneous action of corrosion and cyclic stress. The usual case involves rapidly fluctuating stresses that may be well below the tensile strength.
