A polymer (/ ˈpɒlɪˈmɛr /; Greek poly-, "many" + -mer, "part") is a large molecule, or macromolecule, composed of many repeated subunits. Due to their broad range of properties, both synthetic and natural polymers play essential and ubiquitous roles in everyday life. Polymers range from familiar synthetic plastics such as polystyrene to natural biopolymers such as DNA and proteins that ...

International Journal of Materials Science and Applications (IJMSA) is an interdisciplinary journal devoted to experimental and theoretical research on the synthesis, structure, properties and applications of materials. Particular interest is placed on materials having relevance to microelectronics, photonics and micromachining. IJMSA welcomes the following tier 1 article types: Book Review ...

Materials Science in Semiconductor Processing provides a unique forum for the discussion of novel processing, applications and theoretical studies of functional materials and devices for (opto)electronics, sensors, detectors, biotechnology and green energy. Each issue will aim to provide a snapshot of current insights, new achievements, breakthroughs and future trends in such diverse fields as ...

As an academic department, we are primarily a graduate research and education department where students may get an M.S. or Ph.D. with us or in the Materials and Nanotechnology program. We do offer a minor for undergraduates at NDSU who want a really good grounding in polymer materials science. Early in the summer, when North Dakota is at its very best, sunshine, big skies, etc., we teach short ...

Advances in Materials (AM) publishes reviews, full-length papers, and short communications recording original research results on, or techniques for studying the relationship between structure, properties, and uses of materials. The subjects are seen from international and interdisciplinary perspectives covering areas including metals, ceramics, glasses, polymers, electrical materials ...

Thiol-based polymers. The thiol-based polymers have disulfide bonds that can be reversibly cross-linked through oxidation and reduction. Under reducing condition, the disulfide (SS) bridges in the polymer breaks and results in monomers, however, under oxidizing condition, the thiols (SH) of each monomer forms the disulfide bond, cross-linking the starting materials to form the polymer.

In article number 1706913, Ali Khademhosseini, Yu Shrike Zhang, and co-workers report a multichannel coaxial extrusion system for microfluidic bioprinting of circumferentially multilayered cannular tissues in a single step, which allows these perfusable cannular constructs to be tuned continuously between monolayers and multiple layers at regular intervals across the length of a bioprinted tube.
