k-means clustering is a method of vector quantization, originally from signal processing, that is popular for cluster analysis in data mining. k-means clustering aims to partition n observations into k clusters in which each observation belongs to the cluster with the nearest mean, serving as a prototype of the cluster. This results in a partitioning of the data space into Voronoi cells.

An exit strategy is a means of leaving one's current situation, either after a predetermined objective has been achieved, justifying premises or decision markers for any given operational planning changed substantially, or as a strategy to mitigate imminent or possible failure. An organisation or individual without an exit strategy may be in a quagmire.
