Emotion can have a powerful effect on humans and animals. Numerous studies have shown that the most vivid autobiographical memories tend to be of emotional events, which are likely to be recalled more often and with more clarity and detail than neutral events.. The activity of emotionally enhanced memory retention can be linked to human evolution; during early development, responsive behavior ...

Memory is the faculty of the brain by which information is encoded, stored, and retrieved when needed.. Memory is vital to experiences, it is the retention of information over time for the purpose of influencing future action. If we could not remember past events, we could not learn or develop language, relationships, or personal identity (Eysenck, 2012).
