Acute ischemic stroke (AIS) is among the leading causes of death and long-term disability. Intravenous tissue plasminogen activator has been the mainstay of acute therapy. Recently, several prospective randomized trials documented the value of endovascular revascularization in selected patients with large-vessel occlusion

within the anterior circulation.

Diagnosis and Management of Acute Ischemic Stroke - Mayo

Background and Purposeâ€”The authors present an overview of the current evidence and management recommendations for evaluation and treatment of adults with acute ischemic stroke. The intended audiences are prehospital care providers, physicians, allied health professionals, and hospital administrators responsible for the care of acute ischemic stroke patients within the first 48 hours from ...

Guidelines for the Early Management of Patients With Acute

2018 Guidelines for the Early Management of Patients With

A strokeâ€”also called a cerebrovascular accident (CVA) or a brain attackâ€”is a reduction or an interruption of the flow of blood through an artery to one or more areas of the brain within the territory supplied by that artery. The end result is varying degrees of neurological and/or cognitive malfunction lasting longer than 24 hours. A very severe stroke can cause sudden death.
