Nonetheless, organic chemists and organic chemistry will surely be better off to name these same compounds systematically as 1-chloro-2-butene and 3-chloro-1-butene. Use of systematic nomenclature is a bit like energy conservation - we all recognize it is necessary, but we would just as soon the start be made after we are dead.

The science of organic chemistry, in fact, has its origins in the study of natural products, and has given rise to the fields of synthetic organic chemistry where scientists create organic molecules in the laboratory, and semi-synthetic organic chemistry where scientists modify existing natural products to improve or alter their activities.

Chapter 6: A Brief History of Natural Products - Chemistry

Early chemists believed in vitalism, or the idea that there was a vital force in organic matter that differentiated it from inorganic matter. This was disproved in 1828 when Wohler synthesis converted an inorganic ammonium compound into an organic compound. The most important discovery was not until 1858 when the ability of carbon molecules to form a chemical lattice was discovered.
