Causality (also referred to as causation, or cause and effect) is what connects one process (the cause) with another process or state (the effect), [citation needed] where the first is partly responsible for the second, and the second is partly dependent on the first. In general, a process has many causes, which are said to be causal factors for it, and all lie in its past (more precise: none ...

T-symmetry or time reversal symmetry is the theoretical symmetry of physical laws under the transformation of time reversal: $t \rightarrow -t$. T-symmetry can be shown to be equivalent to the conservation of entropy, by Noether's Theorem. But as the second law of thermodynamics does not permit entropy to be conserved in general, it follows that the observable universe does not in general show symmetry ...

The Science Three-Level Hypothesized Explanation of the IM effect (McGrew, 2012). Interactive Metronome (IM) is believed to improve the resolution and efficiency of an individual's internal brain clock(s) and temporal processing. In turn, it is hypothesized that this results in more efficient brain connectivity, communication, and synchronization via increased integrity of the brain's white ...
